DETAILED ACTION

Specification

35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: On page 15, the explanation of the feature discussed below in the 112 rejection of the claims, i.e. the explanation of the "oxygen deficit tilting structure" is unclear.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors. Note that the examiner does not understand the meaning of the last few lines of claim 1 which cite: "a layer of metal oxide having a structure in which a bond with oxygen is gradually decreased as goes from the surface to the inside and photocatalytic property responding to an electromagnetic wave with wavelength longer than that of the ultraviolet ray is formed on the surface of said catalytic material." The specification discusses this on page 15, but the examiner found the meaning to be unclear.

Claim Objections

Claims 5-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-9 not been further treated on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown (5,092,303) in view of Yoshio (2002/005505). Brown shows everything except the catalyst comprising a structure having a coating with an oxygen deficit tilting structure. Yoshio teaches that it is old in the art to employ such a catalyst with the oxygen deficit tilting structure. It would have been obvious to one having ordinary skill in the art to modify Brown by employing the catalyst coating with oxygen deficit tilting structure, in order to provide a more efficient catalytic action. Note that the space rate percentage is considered to be an obvious matter of design choice, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d, 205 USPQ 215 (CCPA 1980). In addition, the size of the particle is considered to be an obvious matter of design choice,

Art Unit: 3747

is considered to an obvious matter of design choice, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marguerite J. McMahon whose telephone number is 571-272-4848. The examiner can normally be reached on Monday-Wednesday and Friday, 10am-6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steve Cronin can be reached on 571-272-4536. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
